## Enterprise Risk Management

Bridging the gap between strategy, operations, departments, business units, divisions and countries. Enabling organizations to quickly, consistently and efficiently respond to challenges posed by everchanging environments, technology, and regulatory requirements.

## Operational & IT Risk Management

Streamlining risk management processes. Consolidating data from locations, departments, fractured data sets, spreadsheets, and silos to achieve a holistic view of trends, key indicators, and decisional power.

## Project & Portfolio Risk Management

Facilitating a shift from Excel to a mature risk management solution that integrates with the project management solution for a seamless experience.

Today's Risk Management involves empowering organizations to go beyond traditional risk management.

Risk Management Solutions in 2020 need to take an integrated approach to a digital and data-driven risk management, aligning business performance with business conformance, and enabling all departments within an organization to quickly, consistently and efficiently make sound decisions – acting as a unified business.

## Barrier & Hazard Risk Management

Managing operational hazard risks, visualizing barrier and hazard assessments as informative representations, communicating with stakeholders and demonstrating compliance with regulations.

## KRIs, Dashboards and Analytics

Accessing and analyzing KRIs for early detection of increased risk exposures. Producing smart dashboards and generating recommended course of action, assigning accountability, and setting plans into action.

## Integrated Risk Management

Enabling organizations to identify and manage risk entity-wide, selecting strategies for risk mitigation, assigning responsibilities, and establishing a more realistic risk profile for quicker decision making and problem solving.
