

Integrated Risk Management Software

With a modern software tool, the complexity of GRC and management functions can be controlled, and an evaluation based on uniform data becomes possible.

01

High expenses due to redundant work are avoided.

02

Setting roles and responsibilities helps to analyze risks and to execute strategy across the organization.

03

Risk responses (mitigations) are standardized and demonstrably implemented throughout the organization.

04

Acceptance by employees and departments increases through meaningful and cross-disciplinary communication and reporting.

05

Risk management is perceived as a support by helping to monitor risks, measures and controls.

06

Management, executive board and supervisory board have an overview of the various GRC initiatives in cockpits.

07

Effect of GRC initiatives on the organization's performance metrics become quantifiable and visible.

08

The implementation status of measures is documented.

09

Duties of good governance and the diligence of a prudent businessman are met.

10

Organizational failure is avoided.
