

## Advantages of **Business Integrated GRC System** to address the new SEC rules on **Cybersecurity Disclosure**

An integrated GRC system is a reliable partner for robust cybersecurity disclosure and helps find a balance between the goal of robust cybersecurity disclosure and the potential burden on companies, especially smaller reporting ones.

- Oversee, manage, and ensure adherence to the SEC (and other regulatory) requirements.
- Integrate regulatory requirements into the Information and Cyber Security program.
- Align GRC with performance and overarching business objectives at departmental, functional, and corporate levels.
- Enable disclosure of key information about cybersecurity risk management, strategy, and governance with integrated, automated, and custom reports and dashboards.
- Support the reporting of material cybersecurity incidents with automated incident reporting.
- Overcome challenges related to cross-border regulations with a holistic approach to cybersecurity.
- Safeguard organization against compliance complexities and help with structured data requirements.
- Facilitate synergy between security measures and business goals.
- Minimize the burden accompanying compliance efforts.
- Streamline operations and enhance resilience.
- Reduce delayed transparency.
