

# Centralizing ICT Risk Management

for Stronger Resilience

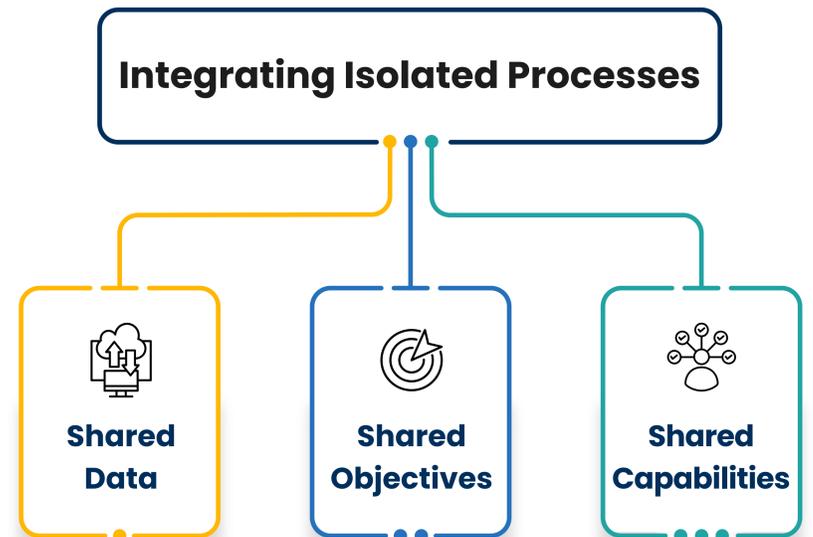

## The Core of DORA

At the very heart of **DORA** lies the requirement for a **robust ICT risk management framework**. Financial institutions must be able to identify, assess, and mitigate ICT risks to ensure systems remain resilient enough to minimize operational disruptions.

## Beyond Isolated Processes

DORA isn't just about isolated risk management activities or ad-hoc vulnerability scans. The **essential key to resilience is integration**, enabling:

## From Silos to Integration

Risk management should **never be a siloed effort**. In a world of hybrid threats and integrated risks, risk management must be holistic and connected across all domains.

## DORA as an Opportunity

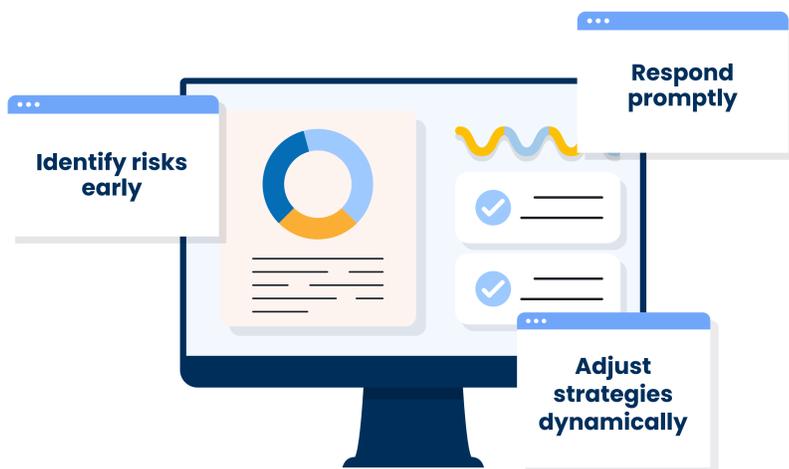

ICT risk management under DORA presents a unique opportunity to guide organizations toward a **contemporary integrated risk management approach**. This means ensuring resilience for critical business services and functions, spanning:

### Business Resilience

*Resilience is not just an afterthought; it's a business objective.*

## Real-time Insights for Resilience

Through **real-time data insights** and **automated workflows**, financial institutions can:

- Identify potential risks early
- Respond promptly to resolve them
- Adjust strategies dynamically to match an evolving, integrated risk landscape

## How Corporater's Integrated Risk Management Enables This

Corporater's Integrated Risk Management capability empowers organizations to manage multiple risk domains, including ICT risks and Third-party risks, all within the context of business strategy and objectives.
