

# Digital Twin of an Organization (DTO)

Create a virtual model of your enterprise with DTO

1

## What is DTO?

A DTO is a dynamic digital model of how your organization operates – connecting objectives, processes, risks, performance, and resources with real enterprise data and business context.

2

### Why It Matters

**Unified Map:** Strategy links to Operations, Units & Functions.

**Break Silos:** People, Data, Process, Risk in Unified System.

**Embed GPRC:** Governance, Performance, Risk and Compliance at the heart of your business model..

**Data-Driven Decisions:** Clearer line of sight from Board to Frontline.

3

### DTO as a Game Changer

**Understand** – A living model of the Risk universe

**Communicate** – Turning complexity into clear narratives

**Proactive & Resilient** – Model tomorrow before it happens

4

### Data, Deployment, Integration & AI

**Data ETL/Transformer:** Supports Structured & Unstructured Sources, Unified "Truth" Model.

**Flexible Deployment:** SaaS, On-Premise, Public/Private Cloud.

**Predictive & Prescriptive:** Use AI capability in your DTO to model what is and what could be.

5

### Creating a Connected Enterprise

**Define System:** Vocabulary, Taxonomy, Language.

**Mirror Structure:** Units, Functions, Geographies.

**Map Processes & Workflows:** Strategy to Execution with Automation.

**Integrate Data & Insights:** Pull data from systems, manual inputs and visualize as dashboards.

**Drive Performance:** Use DTO to monitor, manage, and drive value creation.
